

Dear fellows,

My former supervisor in Barcelona (Spain) is offering a postdoc position in cell mechanics focused on “Modulation of stem cell differentiation by mechanical stimuli”. He is looking for somebody with experience in biophysics, bioengineering or life sciences. The lab is equipped with Atomic Force Microscopy, Optical and Magnetic Tweezers and advanced live-cell imaging. I highly recommend the lab and its members, as well as the city!

Check REF: PhD 04 on <http://www.idibaps.ub.edu/biotrack/>

Btw, the research institute is also offering 7 other postdoc positions in various fields of biomedicine (same link as above).
